Department of Computer Engineering and Applications
GLA University, 17 km. Stone NH#2, Mathura-Delhi Road,
Chaumuhan, Mathura – 281406 U.P (India)

Declaration

I/we hereby declare that the work which is being presented in the Bachelor of technology. Project “**BID-HIT**”, in partial fulfilment of the requirements for the award of the **Bachelor of Technology** in Computer Science and Engineering and submitted to the Department of Computer Engineering and Applications of GLA University, Mathura, is an authentic record of my/our own work carried under the supervision of **Mr. Mandeep Singh, Technical Trainer, Dept. of CEA, GLA University.**

The contents of this project report, in full or in parts, have not been submitted to any other Institute or University for the award of any degree.

CERTIFICATE

This is to certify that the project entitled “BID-HIT”, carried out in Mini Project – I Lab, is a Bonafide work by Abhay Kumar, Aryan Tiwari, Karan Mishra, Amish Gupta and Nikhil Agarwal and is submitted in partial fulfilment of the requirements for the award of the degree Bachelor of Technology (Computer Science & Engineering).

Signature of Supervisor:

Name of Supervisor: Mr. Mandeep Singh

Date: 15-11-2021

Department of Computer Engineering and Applications
GLA University, 17 km. Stone NH#2, Mathura-Delhi Road,
Chaumuhan, Mathura – 281406 U.P (India)

ACKNOWLEDGEMENT

Presenting the ascribed project paper report in this very simple and official form, we would like to place my deep gratitude to GLA University for providing us the instructor Mr Mandeep Singh, our technical trainer and supervisor.

He has been helping us since Day 1 in this project. He provided us with the roadmap, the basic guidelines explaining on how to work on the project. He has been conducting regular meeting to check the progress of the project and providing us with the resources related to the project. Without his help, we wouldn't have been able to complete this project.

And at last, but not the least we would like to thank our dear parents for helping us to grab this opportunity to get trained and also my colleagues who helped me find resources during the training.

Thanking You

ABSTRACT

In this project, we are creating a web application, basically an online auction site which we have named **BID-HIT**. Auctions are the terms most of us has listen but never participated in them basically auction is a public sale of property, jewellery, antiques, goods to the highest bidder. The underlying purpose of an auction sale is to obtain the best financial returns for the owner of the property and to allow free and fair competition among bidders. so, Main question is What happens at Auctions? Once the reserve price is reached during bidding (or no reserve price is set), the property will be 'on the market'. The winning bidder must purchase the property, and the seller must sell. If the property doesn't reach the reserve price, you can negotiate with the seller after the auction. Now the Auctions always have been reserved for expensive property/antiques and Auctions are also quite expensive to arrange, due to changing cultures of technology we have overcome this issue to make auctions online ,affordable and easy for each and every one , our website provide best auctions happening right now and shows upcoming auctions as well and you can see your auctions as per your interests , and bid for your fav property or goods, with safe transactions and terms and conditions, as we have Moto to maintain.

"A satisfied customer is the Best Business Strategy of All".

We have explored the most popular auctions to provide the same experience virtually.

CHAPTER-1

INTRODUCTION

1.1 CONTEXT

This Web Application “BIDHIT” has been submitted in partial fulfilment of the requirements for the award of the degree of Bachelor of Technology in Computer Science and Engineering at GLA University, Mathura supervised by Mr. Mandeep Singh. This project has been completed approximately one month and has been executed in modules, meetings have been organised to check the progress of the work and for instructions and guidelines.

1.2 MOTIVATION

Online auctions can offer great benefits to both buyers and sellers. But as the survey shows, when a consumer pays before receiving the merchandise, or a seller ships the goods before the buyer's payment clears, there is some risk involved. Even though most people have good intentions, things occasionally go wrong. And some people are irresponsible, or even downright dishonest, in their dealings with others.

Auction participants need to be aware of the risks and know how to protect themselves. While there aren't any guarantees in life, it is possible to reduce the potential for trouble in online auction transactions by following some basic safety tips, including:

- Understand how the auction works;
- Check out the seller before you bid;
- Get the contact information of the person or company you're dealing with;
- Look for information about insurance for buyers; • Payment by credit card can protect both buyer and seller; • Consider using an escrow service.

It's easy to get carried away in the excitement of online auctions. Common sense and caution are the keys to happy auction experiences.

1.3 OBJECTIVE

The use of this online auction website is that bidders will be able to get connected us we will offer them necessary information and or give hand to Bid for items. It will help save time and offer

quality deliverables to the bidders by quick response and attention services. This website will replace the manual way of seeking items in the market and travelling long journeys just to get an item yet there are available items just in the neighbourhood be it during day or night.

1.4 EXISTING SYSTEM

The existing Auction System is managed manually. Prior to each auction, the day of auction, the venue and the items on auction are announced through news media. Those who wish to take part in the auction have to arrive at the venue on that day on time. This conventional method most of the times prevent aspiring bidders from participating in the bidding process. Another headache of the old system is to track each bidding process and to make it culminate in financial settlement. So, the system has to keep records of both buyers and sellers until the end of settlement. The process is very cumbersome and time consuming.

1.5 SOURCES

The source of our project (including all the project work, documentations and presentations) is available at the following link <https://github.com/abhayxkumar/bid-hit/>.

CHAPTER -2 SOFTWARE REQUIREMENT ANALYSIS

2.1 HARDWARE AND SOFTWARE REQUIREMENTS

Hardware Requirement

- Processor: Core i3
- Operating System: Windows 7/XP
- RAM: 4GB
- Hardware Devices: Laptop/PC
- Hard Disk: 1TB
- Display: Min. 720p

Software Requirement

- Technology Implemented: Full Stack Web Technologies
- Language Used: HTML/CSS, JavaScript
- Database: Google Firebase
- User Interface Design: Figma
- Web Browser: Google Chrome, Mozilla Firefox

2.2 MODULES AND FUNCTIONALITIES

This project will support on all internet-based devices such as mobile phones, laptop, tablets, etc.

- In this project, we will first make user register and provide him particular id and we will authenticate the user Aadhar and pan card for security and trust purpose and then our team will verify and respond back in certain time.
- We will use razor pay gateway for secure and easy transactions

- We will offer a customer a survey for his better experience and show upcoming and ongoing auctions according to his survey results for better customer experience
- Bidder can select ongoing auctions and start bidding as per their choices

The particular auction that customer will choose to bid, that product auction portal will open only for certain amount of time so to make the bidding customer have to come and make the bid at that particular time so to make the bidding fair for all and we will provide notification remainder also for that so customer don't miss their fav product bids, and then highest bidder in that auction gets the product.

2.3 FEASIBILITY OF PROJECT

This site will provide a real time responsive platform, where a person (bidder) can create his account and authenticate himself with any of its id proof. This authentication will help to determine whether the person(bidder) is real or not.

- All products will contain its legal papers, so that the product/ or any property/antique can be verified and considered as genuine and that information will be encrypted end to end so that frauds can be prevented.
- A time slot will be decided for the auction of each product for its bidding for starts and end and also, we show its base bidding amount.
- The bidder can find the things in which he is interest to bid, also he will also be given different time slots according to us so that bidder can select the time slot so that he can bid when he is free.

In this real time platform, the bidder will enjoy his bidding with a feasible responsive user interface. Also, after the completion of auction, we will provide proper feasible payment methods so that bidder can pay with a very encrypted way.

2.4 USE OF PROJECT

The use of this online auction website is that bidders will be able to get connected us we will offer them necessary information and or give hand to Bid for items. It will help save time and offer quality deliverables to the bidders by quick response and attention services. This website will replace the manual way of seeking items in the market and travelling long journeys just to get an item yet there are available items just in the neighbourhood be it during day or night.

BASIC TERMINOLOGY

1. Agile

A is for agile, a major buzzword across the entire tech industry right now. Agile web development essentially refers to a particular way of working, and you'll often hear this term in the start-up world. In an agile team, web developers will work according to weekly or biweekly sprints. A sprint usually consists of five phases: design, develop, test, deploy and review. You can learn more about agile web development in this article.

2. Algorithm

An algorithm is basically a set of steps for carrying out certain tasks. In computer programming, algorithms are a key part of problem-solving. When creating an algorithm, developers will document all the necessary steps it took to arrive at a solution to a problem, and what each step involved.

3. Adaptive design

The way in which a website is built determines how it appears on different devices. Adaptive design creates a website in several different layouts, each suited for different screen sizes. Depending on what device is being used to access the website, the website will adapt and deliver the appropriate layout. See also: responsive design and mobile-first.

4. Bootstrap

Bootstrap is a free, open-source frontend framework for designing websites and web apps. It was developed by Mark Otto and Jacob Thornton at Twitter in order to encourage consistency across internal tools. Bootstrap includes HTML and CSS-based design templates for typography, forms, buttons, tables, navigation, modals and more, plus JavaScript plugins. Check out this beginner's guide to Bootstrap to get you started. See also: frameworks and frontend.

5. Backend

Backend development essentially refers to everything that goes on behind the scenes. What happens at the backend—or server-side—powers what happens at the frontend, i.e., what the user sees and interacts with. Backend development can be broken down into four main components of a software stack: the server, the database, the operating system, and the software.

6. Browser

A web browser is the software used to access the internet and display web pages. When you type a web address or URL into the browser, you are effectively sending out a series of requests. The browser will gather all the different elements that make up that particular webpage, such as images, ads and content, from wherever they are stored (i.e., different directories or servers) in order to display the page that you see. The most common browsers include Microsoft Internet Explorer, Google Chrome, Mozilla Firefox, Safari for Apple, and Opera.

7. Code

Of course, you can't call yourself a web developer until you know what code is! Code is essentially what web developers write using programming languages (scroll down to languages in this glossary!). To see exactly what code looks like, right-click on your internet browser window and click "view page source". You'll then be able to see the code that's behind this particular website.

8. CSS

CSS stands for Cascading Style Sheets. It is a markup language responsible for the visual elements of a website. HTML (another markup language) is used to determine the structure and content of the webpage. Web developers will then use CSS to style this content; in other words, CSS tells the browser how the HTML elements should be displayed. CSS is used to apply colours and to determine font, text size and alignment, to name just a few. Interested in learning more about it?

CHAPTER-4 TECHNOLOGY USED

4.1 WEB DEVELOPMENT

Web development is the work involved in developing a Web site for the Internet (World Wide Web) or an intranet (a private network).^[1] Web development can range from developing a simple single static page of plain text to complex web applications, electronic businesses, and social network services. A more comprehensive list of tasks to which Web development commonly refers, may include Web engineering, Web design, Web content development, client liaison, client-side/server-side scripting, Web server and network security configuration, and e-commerce development.

Among Web professionals, "Web development" usually refers to the main non-design aspects of building Web sites: writing markup and coding. Web development may use content management systems (CMS) to make content changes easier and available with basic technical skills.

For larger organizations and businesses, Web development teams can consist of hundreds of people (Web developers) and follow standard methods like Agile methodologies while developing Web sites. Smaller organizations may only require a single permanent or contracting developer, or secondary assignment to related job positions such as a graphic designer or information systems technician. Web development may be a collaborative effort between departments rather than the domain of a designated department. There are three kinds of Web developer specialization: front-end developer, back-end developer, and full-stack developer. Front-end developers are responsible for behaviour and visuals that run in the user browser, while back-end developers deal with the servers.

But first it would be great to see the two different types of Web Development: -

- **Front-end:** Suppose you want to create a website for your art gallery. So how should the website look? Well, artsy of course!!! And while looking artsy, it should also have all the relevant information about your gallery such as its address, details about your art-pieces, their prices, etc. Are you getting where this is going? Front End web development basically deals with making your website look like it should! This includes all the details of your website that the users will see and communicate with. All those artsy images, live animations, navigation menus, etc. that you add to your website are a part of Front-End web development. So, the better your frontend is, the higher the chances of good user experience (And also of all your paintings selling out!!!) The main technologies required for Front End development are HTML5, CSS3, and JavaScript.

- **Back-end:** Your website about art gallery is doing great and you are getting lots of footfall! Now, what if you also want to sell your artwork on your website rather than just advertising your art gallery? That's not possible using just front-end development as it deals with mostly how a website looks to the users. And this is where comes in to save the day!!! Back-End Web Development deals with the “back-end” of the website that is hidden from the users. It handles all the complex grimy tasks like data organization and storage and communicates with the front-end to make sure that the site is running smoothly. If any user fills a form in your website or purchases an artwork, the browser basically requests the server-side to process and return the relevant information that is then displayed on the screen using frontend code. There are multiple languages that are used in Back End Development such as Java, Python, PHP, Node JS, etc. While every developer claim that their favourite language is the best, all of these languages have a market demand for suitable projects.

4.3 TOOLS AND LANGUAGES

Tools used to build the Android App are: -

- **VS Code:** VS Code is a source-code editor developed by Microsoft for Windows, Linux and MacOS. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded git.
-

Languages used in building a Web Application are classified as per the Front End and Back End. For designing the Front End of an application, we have used Html, CSS, JavaScript. and for designing the Back End we have used Firebase, Node JS.

- **HTML:** HTML Hypertext Markup Language is an algorithmic language used to create pages on a computer that can be viewed by viewers / viewers.
- **CSS:** CSS is the language we use to style an HTML document. CSS describes how HTML elements should be displayed. This tutorial will teach you CSS from basic to advanced.

- **JavaScript:** JavaScript is a prototype-based programming language. This programming language came and went on the user's computer.
- **Firebase:** Firebase is a platform developed by Google to create mobile and web applications. It was originally an independent company founded in 2011. In 2014, Google edited the platform and now this is their flagship offer for app development.

CHAPTER- 5

DFD

The above diagram represents the point of view of the new user, the registered user, and the admin and the arrows to each module show the interactivity of the person.

For the new user, the user will first be required to create up a new account so will interact with the “sign-up module” and fill up all the details that will be stored in the database. The user now will enter onto the Home Page where they will find many options where they can bid, can get the terms and conditions, can contact to developers for their queries.

After getting signed in, the user can his bidding by logging in the account.

For the registered user, the user will be having the credentials to login and will interact with the “login module” and then the user will enter onto the home page where there will be and can directly go for bidding, where he bid on his interested items. And where he can enjoy the real time bidding with interactive interface.

For the Admin he can connect with each and every module mentioned in the use case diagram. Apart from the modules mentioned in use case diagram there are modules like About Us, Terms & conditions and product section that every registered user can access.

The above diagram represents the point of view of the new user, the registered user, and the admin and the arrows to each module show the interactivity of the person.

For the new user, the user will first be required to create up a new account so will interact with the “sign-up module” and fill up all the details that will be stored in the database. The user now will enter onto the Home Page where they will find many options where they can bid, can get the terms and conditions, can contact to developers for their queries.

After getting signed in, the user can his bidding by logging in the account.

For the registered user, the user will be having the credentials to login and will interact with the “login module” and then the user will enter onto the home page where there will be and can directly go for bidding, where he bid on his interested items. And where he can enjoy the real time bidding with interactive interface

CHAPTER - 6 IMPLEMENTATION AND USER INTERFACE

6.1 User Interface (Laptop View)

Login

Login is verified by Google Firebase if user is not recognized by database user cannot enter.

Sign Up

This page registers the new user in our database.

The image shows a screenshot of a website's sign-up page. At the top left is the Bid-Hit logo, which consists of a circular emblem with 'BH' inside and the word 'Bid-Hit' next to it. The top navigation bar includes links for HOME, PRODUCTS, T & C, ABOUT US, CONTACT US, and LOGIN. The main content area features a dark gray rounded rectangle containing a sign-up form. The form has a title 'Sign Up Here' at the top. It includes fields for 'Email Address' (with placeholder 'Enter Email Address') and 'Password' (with placeholder 'Enter Password'). Below these fields is a checkbox labeled 'Terms & Conditions'. At the bottom of the form are two buttons: a white 'Sign Up' button and a smaller 'Sign In' button.

Specialized Auction

Here's why our customers choose us

- Highest rated user-friendly design.
- Easy and fast bidding process.
- Neither upfront nor high fixed cost.
- Fast growing procurement team.
- Dedicated 24x7 support.

"BidHit has brought in transparency in our entire purchase process . It has helped us bring cost reduction on 2% on our purchase. It is very simple and fast. I will suggest everyone to use this website."

Roshan Mittal
Asst. Purchase Manager
Allana Group

Antique Wooden Kerala Box

Description

This is very rarely finding Antique Wooden Kerala Box With Antique Brass decoration. Made of single piece of teak wood ancient Carpenters in Kerala. Must be 100-150 years old. It has wonderful traditional Kerala design on top. The piece in good condition without any damage.

This kind of boxes were commonly used till early 19th century. This is the one of the great example of artistic talent of the ancient Kerala craftsmen. This boxes seems in different model in different locations of Kerala . In this boxes they used to carry their daily usage stuffs like bunch of keys, coins, chewing pans, perfumes, some special spices etc. This usually find in woods like teak, Rose wood and Jack wood.

The box made out of single piece of wood have great demands in antique lovers across the world. In ancient times they wanted this to be look better than others and they spent any money to make the Tortoise box attractive. That is the reason why you can see nice brass decoration in these boxes.

Care Instruction: Clean it with a soft damp cloth

Terms & Conditions

There are the terms and conditions for the bidding on our website. Verified and released by Indian Government.

Bid-Hit

HOME PRODUCTS T & C ABOUT US CONTACT US LOGIN

General Terms and Conditions of Usage and Auction Debit:-

1. DEFINITION OF TERMS

1.1 "Acceptance of bid" means the electronic acceptance of any bid that is made for a sales offer by the system of the secondary market for financial products in a Indian Auction following a bid at the minimum price or for a bid at a fixed price in the Buy-Now option, by selection of the Bid at a Sealed Auction or bilateral agreement between Buyer and Seller.

1.2 "Adapted Contract Model" means the contract and processing models provided by the user in accordance with item 15.1 below, for the sale and purchase agreement, and "Adapted Contract Model" shall mean every individual model of contract and a majority of contract models.

1.3 "Auction" means the electronic virtual auction of a financial product on the secondary Market, in which the user participates, either at a fixed price, on highest bidder basis or on bid selection.

1.4 "Bid" means the offers made by a bidder in the effort to buy a financial product in an Auction or bilaterally outside an auction at a price determined by it.

1.5 "Bidder" refers to a user who bids for financial products in an Auction.

1.6 "Bid selection" means the selection of a bid and a bidder with which the seller wants to complete the transaction.

1.7 "Indian Auction" means a type of Auction, where the seller has to define a Reserve Price and Bidders are able to place Bids while seeing the current Bidding level. If the highest Bidder is higher than the Minimum Price, he wins the Auction.

1.8 "Business days" are weekdays with the exception of Sundays and nationwide uniform public holidays.

1.9 "Buyer" means the successful Bidder, who enters into a sale and purchase agreement with the seller in respect of a financial product.

1.10 "Buy-Now option" means the variation of an Auction as described in item 12.5 below, in which the seller links its sales offer to a fixed price and the Acceptance of bid is made at the first Bid.

1.11 "Confirmation of registration" means the confirmation described in item 4.2 below with respect to the conclusion of an agreement between Debitos and the user.

About Us

This site will provide a real time responsive platform, where a person (bidder & seller) can create his account and authenticate himself with any of its id proof. This authentication will help to determine whether the person(bidder/seller) is real or not. And if the user is seller, first he have to upload its legal papers, so that the product/ or any property/ antique can be verified and considered as genuine and that information will be encrypted end to end so that frauds can be prevented. And also he can select a time slot in which the auction starts and end and also he can show its base bidding amount. If the person is bidder, he can find the things in which he is interest to bid, also he will also be given different time slots according to seller so that bidder can select the time slot so that he can bid when he is free. In this real time platform, the bidder will enjoy his bidding with an feasible responsive user interface. Also after the completion of auction, we will provide proper feasible payment methods so that bidder can transact the seller with a very encrypted way.

Our Team

Each and every our group member is important for our project, we are working on it to make it usable.

Mike P.
"A lot of the times it's the buyers or sellers, they know how to skirt the system, knock on wood I haven't lost any money to buyers or sellers , 98% of the time everything goes the way it's supposed to, most people are pretty cool."

Sarah Taylor
"Almost everything in my room is from Bidhit great company all the packages Come on time."

Andres Williams
"Great products! Fast shipping!"

Racheal Jay
"When I started selling on ebay, I would have given them 1 star. They did make it extremely difficult for me, however now I am a reasonably established seller, they have been so good to me."

Ben Shipik
"Best service buy more from Bidhit this not aliexpress when received all items on time and as description."

John Wick
"Order received in a timely manner. Packaged to perfection."

Jethalal
"Very helpful customer service team. I spoke with Nikhil, Aryan, Abhay, Karan and Amish from sales team and all were very helpful."

Macca Emma
"Nice website i will do shopping."

Peterson
"I ordered a macbook and the process was smooth! I strongly trust Bidhit despite the running scams."

Sushmita
"Have always been able to find what I need at an affordable price."

Michael Anderson
"I am so thankful that Bidhit stepped in and gave me a full refund of an item I ordered but never received! The tracking history showed it was delivered but who knows what happened! The seller never responded but Bidhit did their job!!! Thanks Bidhit!"

Anupama
"Bidhit is a great place for everyday people to make a little extra cash. I've sold a few things on auction and it's exceeded my expectations my vase for 2x the amount I was hoping for, very happy customer."

Antique Wooden Kerala Box

Description

This is very rarely finding Antique Wooden Kerala Box With Antique Brass decoration. Made of single piece of teak wood ancient Carpenters in Kerala. Must be 100-150 years old. It has wonderful traditional Kerala design on top. The piece in good condition without any damage.

This kind of boxes were commonly used till early 19th century. This is one of the great example of artistic talent of the ancient Kerala craftsmen. These boxes seems in different model in different locations of Kerala. In these boxes they used to carry their daily usage stuffs like bunch of keys, coins, chewing pans, perfumes, some special spices etc. This usually find in woods like teak, Rose wood and Jack wood.

The box made out of single piece of wood have great demands in antique lovers across the world. In ancient times they wanted this to be look better than others and they spent any money to make the Tortoise box attractive. That is the reason why you can see nice brass decoration in these boxes.

Care instruction: Clean it with a soft damp cloth

Review Page

The screenshot shows a testimonial from Mike P. at the top. It features his circular profile picture, which is a portrait of a man with dark hair and a beard, wearing a blue t-shirt. Below the picture is his name "Mike P." and a quote: "Alot of the times it's the buyers or sellers, they know how to skirt the system, knock on wood I haven't lost any money to buyers or sellers , 98% of the time everything goes the way it's supposed to, most people are pretty cool." Further down is another circular profile picture of a woman with long dark hair, wearing a pink ribbed sweater.

6.3 Google Firebase Realtime Database

Project Overview

Project Settings

The screenshot shows the 'Project settings' page for the 'loginweb' project. The left sidebar is identical to the Project Overview. The main content area has tabs for General, Cloud Messaging, Integration, Service accounts, Data privacy, Users and permissions, and App Check (BETA). The 'General' tab is selected. It shows 'Your project' details: Project name (loginweb), Project ID (loginweb-34cad), Project number (178607050995), Default GCP resource location (Not yet selected), and Web API key (AlzaSyCwcXkAZolfiQfc7lqAFpoa3-a5_cElHg). The 'Public settings' section allows setting a Public-facing name (project-178607050995) and Support email (Not configured). The 'Your apps' section lists a 'Web apps' entry for 'ghvgvh' with an 'Add app' button.

Contact Us Database

The screenshot shows the Firebase Realtime Database interface. On the left, the navigation sidebar includes 'Project Overview', 'Build' (Authentication, Firestore Database, Realtime Database, Storage, Hosting, Functions, Machine Learning), 'Release and monitor' (Crashlytics, Performance, Test Lab, App Distribution), 'Analytics' (Dashboard, Realtime, Events, Conv...), 'Extensions', and a 'Spark' plan section. The main area is titled 'Realtime Database' with tabs for Data, Rules, Backups, and Usage. The Data tab displays a hierarchical tree structure under 'loginweb-34cad-default-rtdb'. The 'Contact Us' node contains several child nodes: 'MSNW', 'abc', 'abcdef', 'abhay', and 'abhay2'. Each child node has three properties: Email, Message, and Name. The 'MSNW' node has an Email of "JDWJ", a Message of "mnaJ", and a Name of "MSNW". The 'abc' node has an Email of "abc@gmail.com", a Message of "kjbavkasy", and a Name of "abc". The 'abcdef' node has an Email of "abcdef@gmail.com", a Message of "iohvoawhp aowi jfowai jwiaj gwaj gpowajg wegj e", and a Name of "abcdef". The 'abhay' node has an Email of "abhay@gmail.com", a Message of "abcd", and a Name of "abhay". The 'abhay2' node has an Email of "abhay2@gmail.com", a Message of "abcd", and a Name of "abhay2". A status bar at the bottom indicates "Database location: United States (us-central)".

Subscribe Database

The screenshot shows the Firebase Realtime Database interface. The left sidebar is identical to the previous screenshot. The main area is titled 'Realtime Database' with tabs for Data, Rules, Backups, and Usage. The Data tab displays a hierarchical tree structure under 'loginweb-34cad-default-rtdb'. The 'Contact Us' node is present. The 'Products' node is present. The 'Subscribe' node contains several child nodes: '1637645999830', '1637685802549', '1637687204150', '1637689110723', '1637734331648', '1637734333602', and '1637746545273'. Each child node has a single 'Email' property. The '1637645999830' node has an Email of "abhay3@gmail.com". The '1637685802549' node has an Email of "nameisaryan123@gmail.com". The '1637687204150' node has an Email of "mishrakaran197@gmail.com". The '1637689110723' node has an Email of "1637734331648". The '1637734333602' node has an Email of "1637746545273". The '1637746545273' node has an Email of "1637746545273". A status bar at the bottom indicates "Database location: United States (us-central)".

Products Database

The screenshot shows the Firebase Realtime Database console. On the left, there's a sidebar with various project management and monitoring tools like Authentication, Firestore Database, Storage, Hosting, Functions, Machine Learning, Crashlytics, Performance, Test Lab, App Distribution, and Analytics. The main area is titled "Realtime Database" and shows a hierarchical database structure under the project name "loginweb-34cad-default-rtbd". The structure is as follows:

```
loginweb-34cad-default-rtbd
  - Contact Us
  - Products
    - Product-1
      - BidPrice: "1234567"
    - Product-2
      - BidPrice: "97997"
    - Product-3
      - BidPrice: "27500"
    - Product-4
      - BidPrice: "7400"
  - Subscribe
```

Below the tree view, it says "Database location: United States (us-central1)". At the bottom left, there's a "Spark" section indicating a free \$0/month plan and an "Upgrade" button.

6.4 Google Firebase Authentication

The screenshot shows the Google Firebase Authentication dashboard. On the left, there's a sidebar with 'Project Overview' and sections for 'Build' (Authentication, Firestore Database, Realtime Database, Storage, Hosting, Functions, Machine Learning), 'Release and monitor' (Crashlytics, Performance, Test Lab, App Distribution), 'Analytics' (Dashboard, Realtime, Events, Conv...), and 'Extensions'. Below that are 'Spark' (Free \$0/month) and 'Upgrade' buttons. The main area is titled 'Authentication' and has tabs for 'Users', 'Sign-in method', 'Templates', and 'Usage'. A banner at the top says 'Prototype and test end-to-end with the Local Emulator Suite, now with Firebase Authentication' with a 'Get started' button. The 'Users' tab is selected, showing a table with columns: Identifier, Providers, Created, Signed in, and User UID. The table lists 11 users with their respective details.

6.5 Razorpay Dashboard

The screenshot shows the Razorpay Dashboard. On the left, there's a sidebar with 'Account Activation' (10% Complete), 'Home', 'Transactions', 'Settlements', 'Invoices', 'Payment Links', 'Payment Pages', 'Payment Button', 'Route', 'Subscriptions', 'QR Codes' (NEW), 'Smart Collect', 'Customers', 'Offers', 'Checkout Rewards', 'Reports', 'My Account' (NEW), and 'Settings'. The main area has a header with 'YOU'RE IN TEST MODE' (switched off), 'Test Mode', 'Announcements', 'Bank Downtimes', and a user profile icon. It features a large chart area with three line graphs. Below the chart is a message: 'You can personalize your account to add your logo, add brand colour and do lots more' with a 'Personalize account' link. A date range selector shows 'Past 30 Days' from '27 Oct 2021' to '26 Nov 2021'. To the right, it shows 'Current Balance: ₹ 0.00' and a 'View Settlements' link. At the bottom, there are three boxes: 'Payment Volume' (₹0), 'Number of Payments' (0), and 'Number of Refunds' (0). Below these are buttons for 'Hourly', 'Daily', 'Weekly', 'Monthly', 'By Total Volume', and a download icon. A note 'No data available.' with a warning icon is displayed at the bottom.
